

Ride the wave of sustainability

The plastic collected from the oceans is used to produce high quality products through sustainable ethical choices.

At least 11 million tonnes of plastic are disposed of at sea every year, every minute a plastic waste truckload is dumped into the ocean.

Plastimark carries out an upcycling process, using tracked certified material from partners committed to reducing CO2 emissions.

By choosing these products you help to protect the fauna and flora of the oceans and maintain the natural balance in marine ecosystems.

From ocean plastic
to a clean planet

“MADE WITH IT”

Plastimark® Wave can:

- Reduce your impact on the environment
- Match functionality with sustainable ethics
- Technological solution to reduce pollution

Why Wave?

Plastic in the oceans is a significant problem on our Planet and threatens the lives of 1.4 million marine species.

Plastimark selects suppliers that meet high quality standards: "fragile" plastic waste is transformed into a premium second-life raw material with an incredible level of purity and without the addition of virgin plastic.

The Wave material is a recycled raw material consisting of 100 % plastic from the oceans, available in various forms.

**RECLAIMED
MARINE PLASTIC:
AN ETHICAL
CHOICE FOR
THE FUTURE**

In the range of baskets, Plastimark® Wave is available for the body of:
